EDUCATION

University of Washington — B.S. Computer Science

Expected June 2027

Coursework: Distributed Systems, Computer Security, Database Systems, Software Engineering, Computer Architecture, Systems Programming, Algorithm Analysis, Linear Algebra

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, C++, SQL, Bash, HTML, CSS

Backend & APIs: FastAPI, REST API Development, Node.js, Pydantic, SQLite, OAuth 2.0

DevOps & CI/CD: Docker, Kubernetes, Ansible, Terraform, GitLab CI/CD, Prometheus, OpenTelemetry, Grafana

Cloud & Infra: AWS (EC2, Lambda, S3, DynamoDB, Cognito, IAM, Amplify), Linux, PowerShell, TCP/IP Networking

Frameworks & Tools: React.js, LangChain, LlamaIndex, Git, Postman, Agile / Scrum

EXPERIENCE

Software Engineer Intern — **Axon**

Seattle, WA · Summer 2026

- Incoming DevOps platform intern building a zero-touch DevOps application to automate end-to-end infrastructure provisioning and deployment workflows at scale.

Software Engineer Intern — **H-E-B**

Austin, TX · Summer 2025

- Replaced a legacy Dell OME alerting pipeline with a FastAPI microservice across 13K+ servers, achieving 99% delivery reliability and preventing \$300K+ outage costs per incident.
- Containerized services with Docker and Kubernetes; automated CI/CD pipelines and wired Prometheus + OpenTelemetry instrumentation into real-time Grafana dashboards.
- Migrated alert transport from SNMP/UDP to HTTP POST over TCP; implemented structured logging with Loguru and SQLite for persistence and querying of 2K+ daily alerts.

Student IT Technician — **University of Washington**

Seattle, WA · Jan 2024 – Present

- Resolved 400+ hardware/software issues across Windows, macOS, and Linux; automated imaging and inventory workflows, cutting device setup time by 40%.
- Deployed and maintained lab infrastructure; trained 5 technicians and standardized documentation across classroom and faculty systems.

Software Engineer Intern — **Southwest Research Institute**

San Antonio, TX · Summer 2023

- Rewrote a CLI fluid thermodynamics simulator as a React GUI with CSV export, cutting engine test setup from minutes to seconds for 40+ engineers.
- Refactored Visual Basic data visualization pipelines to streamline analysis workflows, saving significant weekly engineering hours.

Research Intern — **Southwest Research Institute**

San Antonio, TX · Summer 2022

- Processed and digitized NASA mission telemetry (Europa Clipper); assisted Python-based sensor calibration testing.

PROJECTS & LEADERSHIP

Automated Windows Workstation Deployment Infrastructure (2026) github.com/eileendong/bare-metal-provisioning

- Built an Ansible-driven Windows deployment system integrating with MDT/WDS PXE, eliminating 20+ manual steps.
- Automated installation/configuration of 20+ enterprise applications using IaC (Ansible, PowerShell, WinRM) and implemented parallel provisioning with checkpoint-based recovery and version-controlled configuration management.

Roomies (2025) github.com/eileendong/roomies

- React + AWS Amplify expense-splitting app; Cognito Auth, Lambda, Textract, S3, DynamoDB; real-time sync via POST APIs and event triggers.

Dub-Grind (2025) github.com/eileendong/dub-grind2

- AI Discord bot (LangChain, LlamaIndex, OpenAI) that summarizes lectures, generates adaptive quizzes, and delivers real-time interactive feedback.

VP & Co-Founder — **UNA-USA (2021–2023)**. Founded the first high-school UN Association chapter in Texas

BroncBotz Robotics (2022–2023) — Wrote autonomous Java logic for FRC competition robot; NTX StemGals 2022 finalists.
